

Attachment 1 - Medical Conditions That Would Cause Children to Be Incapable of Self-Support during Adulthood

Documentation of one of the following conditions automatically makes a child age 22 or over eligible for coverage under FEDVIP. If a child's condition is not listed, the employee's employing office will make its determination based on the documentation submitted:

- AIDS – CDC classes A3, B3, C1, C2, and C3 (not seropositivity alone)
- Advanced muscular dystrophy
- Any malignancy with metastases or which is untreatable
- Chronic hepatic failure
- Chronic neurological disease, whatever the reason, with severe mental retardation or neurologic impairment, for example:
 - Cerebral palsy
 - Ectodermal dysplasia
 - Encephalopathies
 - Uncontrollable seizure disorder
- Chronic renal failure
- Inborn errors of metabolism with complications, such as the following:
 - Adrenoleukodystrophy
 - Gaucher disease
 - Glycogen storage diseases
 - Homocysteinuria
 - Lesch-Nyhan disease
 - Mucopolysaccharide disease
 - Nieman-Pick Disease
 - Phenylketonuria
 - Primary hyperoxaluria
 - Tay-Sachs disease
- Mental retardation with IQ of 70 or less
- Severe acquired or congenital heart disease with decompensation which is not correctable
- Severe autism
- Severe juvenile rheumatoid arthritis
- Severe mental illness requiring prolonged or repeated hospitalization
- Severe organic mental disorder
- Xeroderma pigmentosa
